5.....	<u>Enumeration</u>
<u>and Check Box</u>	
5.....	<u>Save User</u>

## **SQL Section**

In this section, SQL tables consist of 4 parts ID, User Name, Email, and Enabled. The ID part is increasing automatically and will increase as the user number comes. User Name, Email, and Enabled sections will continue to be added to the table with the information coming from the same user button. If there is a Disabled user, there is an additional button for this, and it allows filtering them in SQL.

## **Lists and Menu**

The part visible to the user consists of a Username, Display Name, Phone, Email, User Roles, and Enabled, all of which will be set as a text box area. Data will be sent via PHP. User Roles are Enumerated types and will contain 3 roles.

## **Text Box Areas**

These areas will be adjusted to shift 112 px from the center of the page to the right. The user will be able to enter her / his inputs here.

## **Enumeration and Check Box**

This part will only exist for the User Roles part and will have 3 enumeration types: Guest, Admin, and SuperAdmin. In addition, a ticking mechanism in the form of a boolean Check has been put in for the Enabled part. If it is Enabled, it will click and activate. If not, it will not be marked.

## **Save User**

The button required for the registration of the user has been determined as Save User, the information of the user will be saved every time the information is entered, and it is checked that it is not null.
